Ananya Prasad

itsananyaprasad@gmail.com | Github | Linkedin

Skills

Languages: Python, SQL, C++, Shell, Java8

Tools: Git, Oracle, Splunk, Linux, Rest APIs, Flask, Junit, pytest, SonarQube, CI/CD

Certifications: AWS certified solutions architect, OCA-1ZO-082

Work Experience

Cisco, Bangalore

Site Reliability Engineer ***Aug 2024 - Present***

- Engineered a Python-based automation framework with shell-script integrations, raising automation coverage to ~90% and reducing Oracle database patching downtime by 33% (3 hours → 2 hours); introduced rigorous validation safeguards that hardened reliability and reduced post-patch failures.
- Designed and developed UI layouts to streamline DBA replanning workflows, eliminating 1–2 hours of manual effort per day planning cycle across 360+ change requests per quarter during peak scheduling/replanning phases.
- Delivered end-to-end feature development, including unit/integration testing (JUnit, pytest), SonarQube static analysis, and Scava security scans across multiple tool repositories; adhered to CI/CD lifecycle governance with a consistent QA-to-production deployment rules.
- Owned full-stack delivery across the platform's backend services and frontend applications, driving feature enhancement architecture, code reviews, and cross-component integration end-to-end.
- Conceptualized and built an AI/ML Proof of Concept, a log-analysis pipeline integrating Splunk with Flask APIs, training an XGBoost model on log-derived features to detect anomalies and predict failures, enabling early-warning alerts that proactively reduce incident occurrence.
- Provided ongoing developer support for an enterprise-wide automation tool serving ~350+ change requests per quarter, ensuring high availability, resolving user-reported issues, and maintaining operational continuity year-round.
- Performed root cause analysis (RCA) and incident mitigation for high-severity production issues, provided STFs and LTFs to prevent recurrence.
- Operated on production host environments while driving the change-management lifecycle, logging change requests, coordinating approval workflows, and enforcing governance controls to remain aligned with operational policies and audit standards.

Technical Intern I ***Jan 2024 – June 2024***

• Gained hands-on exposure to LDAP infrastructure, including setup, configuration, and authentication workflows

• Developed functional understanding of Oracle database operations through hands-on learning and exposure to enterprise infrastructure workflows

Microsoft Engage ***May 2022 - June 2022***

Mentee

• Built a content-based movie recommendation system using cosine similarity as part of a structured mentorship program

Education

Vellore Institute of Technology ***Oct 2020 - Oct 2024***

B.E. in Computer Science and Engineering ***CGPA: 8.96/10***

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Data Mining, Advance Data Structures and Algorithms, Information Retrieval, Image Processing

Project Work

Journal *(Feb 2023 – Apr 2023)*

Built a full-stack social media web app with REST APIs and a responsive React frontend.
Tech: MongoDB, Node.js, React, Express
GitHub: https://github.com/ananyap18/journal

Briefily *(Jan 2023 – Feb 2023)*

Developed an AI-powered SaaS text summarization tool using OpenAI API.
Tech: React, Tailwind CSS, OpenAI API
Live: https://brieflyfy.netlify.app/

VIT Resume Builder *(Oct 2022 – Dec 2022)*

Created a web app to auto-generate college-format resumes, reducing manual formatting.
Tech: Python, HTML, CSS, JavaScript
Live: https://vit-resume-builder.vercel.app/
